Continuation of 13. Other: This advisory replaces the advisory action mailed 2/26/07. The amendment filed 1/4/07 will be entered. The claims are rejected under Peters in view of Elkins and Muramatsu, et al. Applicant argues that while Muramatsu teaches such a small thickness in an observation plate, there is no teaching for such a thickness in a reaction plate. Examiner notes that while the preamble recites "reaction substrate", there is nothing in the claim which would distinguish a reaction substrate from an observation substrate. Indeed, the devices of Peters, Elkins and Muramatsu, et al. appear to have features common to both substrates.
